

Rexell Anti-Sybil Identity Scenarios (Expanded)

Scenario / User Type	User Action	Requirements (Stake/Vouch)	System Outcome & Explanation
1. Genuine Fan (New User) No Web3 history, no friends.	Wants to BUY a 200 INR ticket.	Zero Stake. Zero Vouches.	Approved to Buy. Buying threshold is low. User buys frictionlessly.
2. Genuine Fan (Web3 Veteran) Old wallet, ENS domain, history.	Wants to BUY or RESELL.	Zero Stake. Zero Vouches.	Approved for Both. On-chain reputation grants Score=70+. No capital locked.
3. Genuine Reseller (Vouched) New wallet, got sick, needs to sell.	Wants to RESELL.	Zero Stake. 1 Vouch from friend.	Approved to Resell. Friend's collateral is locked. Score hits 70. Friend is safe.
4. Genuine Reseller (No Friends) Got sick, no one to vouch.	Wants to RESELL.	50 cUSD Stake.	Approved to Resell. Locks deposit to cross Score=70. Withdraws 50 cUSD later.
5. The Sybil Farm 100 new wallets hoarding tickets.	Wants to RESELL 100 tickets.	5000 cUSD Total Stake.	Deterred or Slashed. Massive capital required. If caught, 5000 cUSD is slashed.
6. The Gullible User Existing user vouches for a stranger/bot.	Vouches for a bot to help them sell.	Collateral / Reputation locked.	Slashed. Bot gets banned. Gullible user loses locked collateral.
7. The 'Cluster' Farm Funds 100 wallets from 1 source to bypass checks.	Wants to RESELL.	Penalty triggers. Requires 500 cUSD/wallet.	Deterred. Oracle detects funding cluster. Penalty applied. Cost to attack balloons 10x.
8. The 'Vouch Broker' Legit user tries to vouch for 50 people for a fee.	Attempts to mass-vouch.	Hard Cap (e.g., max 3 vouches).	Blocked. Contract limits active vouches per user. Prevents a 'Vouching Black Market'.
9. The Patient Scalper Ages a wallet for 6 months without using it.	Wants to RESELL.	Partial Stake (e.g., 25 cUSD).	Deterred. Wallet has 'age' but no 'diversity' (no smart contract interactions). Score only hits 40. Still requires stake.
10. The Wash Trader Scalper vouches for their own alt-wallets.	Creates a fake 'trust web'.	Requires massive root capital.	Slashed/Blocked. Requires 1 highly staked root wallet. If the web is caught, the root wallet loses its entire heavy stake.
